Task 2: Student Digital Portfolio

This task focuses on building a professional digital presence by creating and setting up profiles on important platforms used by students and professionals. These platforms help in showcasing skills, networking, and participating in technical communities.

Platforms Used

For this task, I created and explored profiles on platforms such as GitHub, LinkedIn, and Stack Overflow. Each platform serves a unique purpose in a student's academic and professional journey.

- **GitHub** – Used to store and manage projects, helping in building a strong technical portfolio.
- **LinkedIn** – A professional networking platform to connect with peers, recruiters, and showcase academic details.
- **Stack Overflow** – A community-driven platform where developers ask questions, share knowledge, and solve technical problems.

Future Usage Plan

In the coming years, I plan to actively use these platforms to upload projects, engage in technical discussions on Stack Overflow, and build a strong professional network. These platforms will play a key role in improving my skills and securing internships and career opportunities.
